User Testing Plan

THE EXTENSIVE JSON FILE CRASHED MY PROJECT AND I HAVE TO CREATE IT AGAIN SO PLS BEAR WITH ME AND READ THROUGH THE IDEATION AND PLAN FOR THE WEB PAGE <3

Overview:

This project's goal is to reimagine/redesign Apple Music Replay. I feel like the existing User Experience is very bland and needs some pizzazz/movement/flow/etc. I also would like it to be a bit more interactive than it currently is. I want to create this to solely exist as a web interface which can maybe be adapted to other screens.

Tone of Feedback I Would like:

- Ask questions (if you have!)
- Pls share any thoughts you have about the existing interface of Apple Music Replay/Spotify Wrapped.

Questions:

- What are your thoughts on the flow of the page (ideation only since I don't have an active website yet)?
- What can I add/ what would you like to see as an improved Replay or Wrapped?

IDEATION:

- The page starts with a gradient background with dark text on it that says "Welcome to Replay '23"
- There is a vinyl player animation below it
- Once you start scrolling, the text slowly disappears and the vinyl player starts playing and upon more scrolling, the page starts zooming in to the vinyl player.
- It keeps zooming in until you kind of enter the vinyl player and then 3-5 vinyls will move across the page from left to right, leaving behind text which will tell you about the total minutes you've listened to you and your milestones.
- Upon more scrolling, there is an animation that will extend across the page and drop down album cards which will tell you the top 5 albums.
